

This document has been prepared for delegates wishing to continue their journey in the C-Bus training by attending the WISER2 Course (T3), this details the prerequisite knowledge that the delegate must fully understand before commencing the course, otherwise they may find it difficult to keep up and may also affect their ability to successfully complete the training.

Delegates must of already completed the Introductory (T1), Refresher (T2) or already have been successfully installing C-Bus projects.

The delegates **MUST:-**

- Be able to create C-Bus Toolkit Projects.
- Be able program Input and Output C-Bus devices
- Understand Trigger Groups and Action Selectors to Control Scenes.
- Understand WISER Basic concepts of creating new projects.
 - Understand Scenes: Be able to store scenes in Wiser2 and allow switches (eDLT and Saturn) to trigger.
- Understand how Event Schedule can be added.
- Understand Basic Networking.

The Course Covers:

To simulate real life project the delegate will be asked to create their own WISER2 project based on a client's wish list which shall include:-

- Scenes
- Be able to limit user access to various control widget
- Add Timed Events
- Use PIR to control a load
- Use IP Camera

Each project will be loaded to the training equipment and tested to make sure the delegate has managed to successfully interpret the client requirements, and the program actually works.
